Some of you have asked me questions of the form: “what is a good linear algebra reference?”

I’m sure there are good on-line reference, but I don’t have a good list. Here are some decent books at the level of a “*second course in linear algebra*”, though!

- [Hoffman and Kunze, *Linear Algebra*](#)
 - [Helene Shapiro - *Linear Algebra and Matrices*](#)
 - [Weintraub - *Linear Algebra for the young mathematician*](#)
