Resources: Gradescope

George McNinch

2024-01-01

During the course, students will submit solutions to *problem sets*.

These submissions will be made via gradescope; your work will be read/marked by a course grader, and it will then be returned, again via gradescope.

Make sure that when you log in to gradescope, you use the *school credentials* option. You should select *Tufts University*, and you'll then be able to login with your **UTLN**. The roster on gradescope has already been populated using the roster on canvas.

Note that submission to gradescope must be made in the form of a *single* PDF file. If you plan to submit handwritten work, it will need to be scanned first. *Make sure to get a high-quality scan*. More information about student submissions to gradescope is available here. In particular, you can find information/advice about getting a good scan of handwritten work here:

https://gradescope-static-assets.s3.amazonaws.com/help/submitting_hw_guide.pdf.
